The LPB 2-20 System...

*the latest generation of excellence
from the company that wrote the book
on carrier current transmitters!*

In less than two years, the LPB 2-20 System has brought superb sound and trouble-free operation to over 500 campus stations. The 2-20 System carries on a proud tradition of design and construction excellence that has put over 8,000 LPB transmitters in service over the past two decades. As with all LPB equipment, the 2-20 System is supported by a company you know will be there when you need them.

Because at LPB, we're committed to the college broadcaster.

The JOURNAL OF COLLEGE RADIO is published 5 times per year [January/February, March/April, September, October, November/December] by the Intercollegiate Broadcasting System, Inc. [a non-profit organization].

Address all correspondence to the JOURNAL OF COLLEGE RADIO, Box 592, Vails Gate, N.Y. 12584

The JOURNAL OF COLLEGE RADIO was founded in 1941 by the Intercollegiate Broadcasting System, Inc., using the title IBS Bulletin. The name was changed in 1955 to IBS Newsletter. In 1964 it became College Radio and in 1969, The Journal of College Radio.

Annual subscription price is \$10.00. Single copy price available on request. Outside the U.S.A. add \$1.00 per year for postage.

Send subscription order and changes of address to Circulation, The Journal of College Radio, Box 592, Vails Gate, N.Y. 12584. On changes please include both old and new address plus address label from back of Journal if possible.

from the editor

Here it is — our Annual Directory Issue with listings for IBS member-stations, and reference listings of record companies, program/PSA/news service sources, and studio/technical equipment and services suppliers.

You may want to make an extra effort to hold-on to each copy of this issue that your station receives, since the listings can serve as a handy year 'round reference source for getting in touch with other stations and with those who supply programs, goods, and services that your station may need.

The station listings are based on information supplied to us by IBS member-stations who returned the questionnaires we mailed early this

Fall. Where the listings are brief and don't include much information, it is usually an indication that the questionnaire was not completed and/or returned. Don't blame us — get after whoever takes in and answers your mail.

Reading some of your handwriting is also no easy task in itself. We tried our best to decipher the correct spelling, but in spite of our efforts and our proofreading, there undoubtedly will be a few typographical errors. (As always, everyone else's listings will be OK; **yours** will be the one with the mistakes).

As you receive this issue, the New Year will be upon us, marking another year of growth and change for our stations. About this time last year, many of you were frantically preparing and filing your FCC power increase applications before the January 1, 1980 deadline. And, with its expected rapid pace of processing, the first of these applications are just starting to gain FCC approval about now . . . a year later. About two-thirds of the ten-watt stations in the country have filed for power increases, and this year should see the applications being granted and actual construction take place. The technical and other operating responsibilities of the higher power levels of 100-watts ERP or more will mean new adjustments to be made by these stations, not only in their operations, but in programming as well.

Stronger signals will be reaching larger audiences, and ascertainment requirements will mean more than simply music programming to deal with the needs, problems, and interests of your community. The thrust of your station will have to turn outwards from an emphasis on the campus, widening to include the overall community as well.

Politically, times may be getting rougher. The federal outlook for financial support for noncommercial educational radio and TV is not overly optimistic under the Reagan ad-

ministration and economic conditions on-campus and in the local community are also tightening up. CPB/NPR-type stations will be competing for dollars and dial space.

More FM stations will be seeking listener and community support for programs and operations as student activities funding feels the pinch of declining enrollments at some campuses.

Cable radio and carrier-current systems may see some growth, especially for new stations who might've filed for the ten-watt license if that were still available to them, but who find the 100-watt minimum a bit too steep in terms of costs.

The crunch is also on at the record companies, as you've no doubt seen expressed in terms of diminished service. Stations will have to become more creative and aggressive in their relationships with record companies in order to maintain reasonable service.

Technology has and will continue to create a multiplicity of new signal sources from which listeners and viewers can choose. Proposals are now being considered to open-up space for more AM and FM stations, stereo AM, low-power TV stations, direct satellite-to-home broadcasts, and more satellite interconnection for stations.

Those ten-watt stations who chose to remain at ten-watts will have to file for the appropriate alternative with their next license renewal. This may mean a change in frequency (dial position) for these stations, either to the commercial portion of the FM band, or elsewhere within the non-commercial educational FM band.

We may see some share-time applications being filed against some stations who are on the air less than 12 hours/day, every day of the year. The most likely places this could occur is where the dial is presently so crowded that there's simply no more room for any new stations. If a school, college, university, or community

group wants to build a new station, their only choice is to seek a share-time arrangement with an existing station, or even more severe, to challenge them at license renewal time.

If all of this sounds less than optimistic, we're only trying to be realistic about the problems facing us. Our stations are going to have to grow and mature, or their long-term future may be in some jeopardy.

Our stations are no longer toys, if in fact they ever were. Our prime purpose can no longer be justified as "training grounds" although this can remain an important secondary purpose.

The reaction of existing ten-watt stations who overwhelmingly filed for power increases last year, is one indication of how much we value our stations. We've got to continue to recognize our new status and responsibilities in both word and deed. And, we've got to let everyone else know that college radio has indeed grown up.

Your feedback by mail, phone, and in-person has let us know that the kind of information we've published in previous issues of this magazine and in IBS President's Newsletters, Special Reports and other bulletins has helped you in a practical way at your station. And, it's important that we continue to hear from you with ideas, suggestions, criticisms and questions.

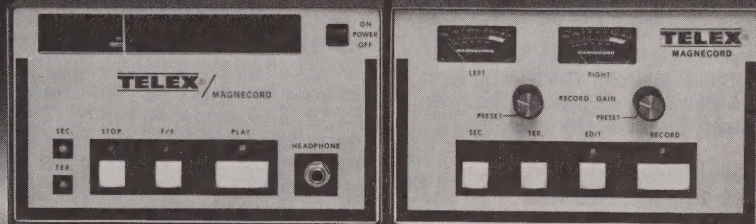

At IBS, we again remind you that we're here to help with those unique kinds of questions and problems you face at your stations. Write us at P.O. Box 592, Vails Gate, New York 12584, or call us at (914) 565-6710.

Another reminder that the IBS National Convention is coming up soon. It's scheduled for March 6-7-8, 1981 at the Shoreham Hotel in Washington, D.C. If you haven't sent in your registration or made your room reservations and travel plans, do it now while there's still time. We're looking forward to another great turnout and hope to see you there.

IBS

D.C. Servo Drive Runs Smooth Steady Cool

Of course, it's Telex/Magnecord

Telex Magnecord broadcast cart machines run cool and steady. So cool no ventilation is required, so steady not even voltage or frequency fluctuations will alter their speed. Thanks to our dc servo flutter-filter drive. Completely immune to RFI and EMI, it meets or exceeds all NAB standards and is suited for local or remote/automated operation.

Standard features at no extra cost.

- An edit pushbutton to add stop cues in playback and omit stop cues in record
- LED indicators show end of tape, status and secondary/tertiary cue tones
- Front panel headphone jack
- VU meters for each channel

Convenient, Flexible

MC-Series is field convertible from mono to stereo, or play to record. Optional remote controls simply plug in.

Four broadcast cart machines to choose from in the Telex/Magnecord

MC-Series - all made in U.S.A. and affordable. Write for detailed information.

directory of IBS member-stations

The following pages contain information gathered from a survey of IBS member-stations conducted this Fall. Stations were asked to supply information about their personnel, programming, and technical facilities. Some overwhelmed us with information which we had to condense,

while others never bothered to return our survey form at all, and some missed the deadline date. The information in each listing simply reflects what was returned to us on time. The very brief listings shown indicate little or no survey response from that station.

Because of the new FCC rules, many stations listed at 10-watts may be in the process of increasing their power and/or changing their frequency. The listings reflect actual facilities at the time of the survey.

The listings are arranged alphabetically by state, and within each state, alphabetically by school or college name. After the station's telephone number the remaining information and abbreviations are as follows:

Method of Transmission:

CC — Carrier-Current or closed-circuit station
FM — FCC-licensed FM station
CA — cable station

Station Power [FM only]:

w - watts
kw - kilowatts

Frequency:

KHz — kilohertz (AM)
MHz — megahertz (FM)

Other:

en — school enrollment
pa — potential audience

Personnel:

GM — general manager
CE — chief engineer
PD — program director
Adv — advisor
MD — music director
BM — business manager
ND — news director
SD — sports director
Adv — advisor

Music Format:

PRG — Progressive/free form mixture
JAZZ
CL — Classical
AOR — Album - Oriented Rock
CONT — Contemporary
MOR — Middle of the Road
REL — Religious

Affiliations:

(networks, news services, syndicated, etc.)
AP — Associated Press wire service
UPI — United Press International wire service

Take a close look at what Tape Transports are going to be like in the '80s

The all new Telex 3000 is here NOW!

No industry has witnessed more technological improvements over the past few decades than our own. So, if you're looking for a tape transport for broadcast, studio or industry, it's important to choose a product with all the latest industry innovations in one unit, the NEW Telex 3000. Write for exciting details about these features.

- Interchangeable head blocks
 - A.Q.R. (Auto Cue Release)
- Differential electro-mechanical braking
 - Spill-proof logic
 - Motion sensing
 - Tape counter
- 4 head capability
 - Hyperbolic tape path
- Remote control capability
- Play only or record/play combinations
 - Auto cue/rewind/cycle
 - Dual speed
 - Hysteresis drive motor
- Two torque spooling motors
 - Quiet operation
- 120/240 volt operation
- Urethane pressure roller

JOURNAL OF COLLEGE RADIO, VOL. 18, No. 3

All Wireless Microphones Are Not Created Equal

This One is a Telex

Wireless mics aren't new, and sometimes it seems as if all systems are basically the same. However, Telex and its Turner and Hy-Gain divisions have combined their 100 years of cumulative experience in microphone, antenna and rf development to produce a DUAL DIVERSITY WIRELESS SYSTEM THAT COSTS AS LITTLE AS SINGLE ANTENNA INSTALLATIONS. The FM receiver can be operated with one or two antennas. When two antennas are used, a unique automatic phase summation network (patent applied for) provides superb dual diversity reception.

The Telex wireless sounds as good as a hard wired mic, offers plenty of options and is economically priced. If you're interested in a wireless system that is *more* than equal—write us today for full specifications.

Audio-Technica rewrites the book on professional phono cartridges.

Introducing The Professionals

The new Audio-Technica ATP Series Dual Magnet™ Stereo Phono Cartridges

What do you really need from a professional phono cartridge? Impeccable quality. Reliability. Uniformity. And reasonable cost. The goals we've met with the new ATP Series cartridges.

The new ATP Series are flat, smooth, low distortion performers that will do your station, studio, disco, library, or commercial installation proud. They are also very tough... the next best thing to "bullet proof". Because we know that "needle drop" isn't just a way to pay for music or SFX. It's a fact of life!

Both ATP cartridges and styli are *uniformly* excellent. When you at last need to replace a stylus, you always get "like new" performance again, and again, and again.

Don't confuse the ATP Series with other "professional" cartridges that are merely modified home units. ATP units don't have to be treated with kid gloves. And yet we haven't sacrificed tracking ability to make them rugged.

The all-new ATP cartridges were specially developed for the working environment. Three models provide a choice of either spherical or elliptical styli. Each cartridge is hand-tuned for optimum performance, with stereo channels matched within 1.5 dB to eliminate balance problems.

All ATP cartridges feature tapered cantilever tubes that combine high strength with minimum moving mass. There's no problem with back cueing, and the brightly colored cantilever tip is readily visible so that you can spot an LP cut quickly and accurately.

ATP cartridges are priced from \$45.00 suggested professional net. Write for complete specifications. Try the ATP Professionals on your own turntables. We know you'll be pleased with what you hear. From the thoughtful pros at Audio-Technica.

Upgrade your entire record-playing system with new ATP tone arms. Rugged and precise, like ATP cartridges. Professional in every respect. Model ATP-12T or ATP-16T just \$150.00 suggested professional net.

GOING FM? DON'T GIVE UP UNTIL YOU CHECK WITH US.

No doubt about it. It's harder now to start a new FM station than it used to be. But, in many areas, there are still good frequencies available.

Our specialty is finding those frequencies for you, then helping you get a construction permit from the FCC with a minimum of time, expense, and hassle.

During the past 8 years, we've guided more than 200 school stations toward their FM goals. Perhaps we can help you, too.

Give us a call, or send for our brochure and fee schedule. Who knows. . . . you may be closer to going FM than you think.

record companies

Almost by definition, any listing of record companies and their people is somewhat out of date by the time it is published. Things change that fast for both the companies and people. Here's what our current information shows. Remember, each company may have a different policy on which stations get record service, and how that service is provided. Many also use regional offices to service stations instead of a central national distribution. All of these companies should be on your station's mailing list for sending playlists, program guides, and other program and promotional information about your station and its activities. They want feedback from you, so don't hesitate to stay in touch with them by mail and phone, and in person where possible.

program / psa producers / new services

The producers, suppliers, and distributors listed offer programs, public service announcements, feature material, and news services. Some supply them free or on a tape return basis, while others carry a price. Our inclusion of any program or source in this list does **not** constitute an endorsement by IBS of the source or its offerings. Each station must make its own decisions on content, quality, and appropriateness of material for its audience. The best way of doing this is to request an audition/demo tape or copy where available. Listen to it and/or look it over first, then make your judgment.

In compiling this list, we did not attempt to balance points of view nor did we include or exclude any source because of political or religious philosophy. Again, you'll have to make your own judgments on what you program on your station. The listings are necessarily condensed, but most will be glad to supply further information, descriptions, catalogs, prices, etc. upon request.

Alcare Communications Inc.
Kathi Colbert, Synd. Coord.

WILKINSON ELECTRONICS

FM-250SS SOLID STATE 250 WATT FM TRANSMITTER

FEATURES - Pure Perfect Sound

- Proven High Quality Exciter - More than 300 in Service
- Small - Light Weight - Requires Little Space
- Drawer Construction for

Simple Maintenance

- Self-Testing Power Supplies
- All Solid State Including Timing Controls
- Safe - Reliable - Efficient
- Exceeds U.S. FCC Specifications

The Wilkinson Electronics FM-250SS all solid state FM broadcast transmitter is housed in a steel cabinet finished in a hard durable enamel finish. Only four square feet of floor space required and it is light enough for table mounting. All operating controls are on the front panel and access to the interior of the Power Amplifier is through the PA cubicle. A sliding drawer directly beneath the PA houses the power supplies and control ladder circuits. Overload indicators as well as overload reset controls are on the front panel of this slide-out drawer. All components of these circuits are completely accessible when the drawer is opened.

equipment / technical services

The companies listed in this section supply a variety of studio and transmitting equipment and/or technical services to radio stations. Where the companies supplied the information, listings include the names of contact people and brief listings of the products and/or services available. Certain manufacturers market through regional representatives or distributors while others sell directly to stations. Most will be glad to send you descriptive literature and prices upon request. When making such requests, please mention you noticed their listing in the IBS/Journal of College Radio, annual directory issue. IBS does not endorse the products or services of particular companies and their inclusion within these listings should not be construed as such an endorsement. As a matter of courtesy, however, we do suggest stations give first consideration to those companies who have placed display advertising within this publication since they have demonstrated their interest in and support of college radio by their participation.

Accurate Sound Corporation

I. Diehl, V.P. Engineering
114 5th Ave.
Redwood City, CA 94063
(415) 365-2843

Mfrs. of High-speed tape duplicators, reel-to-reel tape recorders, Starbird mic boom, cassette-logger. Dealers for: Crown, JBL, Sound Workshop, UREI, Audio-Technica, dbx.

Elegant 150/250 Series Consoles

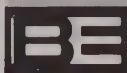

The new look in audio consoles is **ELEGANCE!** Freshly styled, with durable front panel graphics, fashioned control knobs, hardwood end panels, brushed stainless covers and superb audio from field proven modular electronics.

Audio performance? Exceptional! For both 150 and 250 series: Distortion .05% IM and THD from 30 Hz to 20 kHz at +18 dBm output with ± 0.5 dB frequency response. Each mixer in every model has a preamp selectable for either microphone or high level plus a full complement of line, monitor, cue and headphone amplifiers ... all plug-in. Choose from 8 different models, mono or stereo.

For more information, contact your local Broadcast Electronics distributor, or write for our new brochure.

Audio head reconditioning service: manufacture replacement audio heads for Ampex and Scully recorders; manufacture bulk tape eraser "Taberaser." Replacement recorder electronics "Taberamp."

Tapecaster TCM, Inc.

12326 Wilkins Ave., Box 662
Rockville, MD 20851
Tape cartridge machines.

Tech Laboratories, Inc.

Bergen & Edsall Blvds.
Palisades Park, NJ 07650
(201) 944-2221
Rotary switches, attenuators, faders, potentiometers, stand-by power supply.

Television Equipment Associates

Bill Pegler
Box 206
South Salem, NY 10590
(914) 763-8893
Sportscaster headsets.

Telex Communications, Inc.

9600 Aldrich Ave. South
Minneapolis, MN 55420
(612) 884-4051
NAB cartridge tape recorder/reproducer, reel-to-reel recorders, headphones, headsets, high speed tape duplicators, tape transports, amplifiers.

TFT, Inc.

3090 Oakmead Village Drive
Santa Clara, CA 94040
(408) 246-6365
Modulation monitors, remote control equipment STL's, EBs, data acquisition, logging and alarm system.

Thomson-CSF Laboratories

37 Brownhouse Road
Stamford, CT 06902
(203) 327-7700
Mfgs. of audio processing equipment, audio distribution amplifiers, audimax, automatic level controllers, Vollumax, automatic peak controllers and the Dynamic Presence Equalizer.

UMC Electronics Company

Broadcast Products Div.
460 Sackett Point Road
North Haven, CT 06473
Audio consoles, cart machines, splice locaters, replacement motors and heads.

United Recording Electronics Industries

8460 San Fernando Road
Sun Valley, CA 91352
(212) 767-1000
Audio signal processing & measurement products (filters, equalizers, limiters, compressors), consoles response plotting system.

Utility Tower Company

R.G. Nelson, Mgr.
3200 N.W. 38th, P.O. Box 12369
Oklahoma City, OK 73157
(405) 946-5551
Towers - AM, FM, MW, CATV, Base insulators, lighting kit.

Versa Count Engineering

553 Lively Blvd.
Elk Grove Village, IL 60007
FM transmitters, stereo generators, accessory equipment.

Westlake Audio, Inc.

6311 Wilshire Blvd.
Los Angeles, CA 90048
(213) 655-0303
Acoustical design, professional audio equipment installation, service.

Wilkinson Electronics, Inc.

701 Chestnut St.
Trainer, PA 19013
(215) 497-5100
Transmitters, accessories, processing equipment.

Choose from two new recording electronics packages from Inovonics.

Model 380 is the upgraded successor to our well-known 375, used in hundreds of studios and stations around the world. With your tape transport and our 380, you have the ultimate analog recorder. Features of the 380 include:

- ☐ Advanced circuitry to reduce the effects of tape compression and phase distortions.
- ☐ Unprecedented signal and bias headroom for

full compatibility with highest-coercivity tapes.

- ☐ Two "workhorse" EQ and bias settings, plus an optimized mode with separate setup for best performance from "super" tapes.
- ☐ Compatibility with virtually any combination of transports and heads.
- ☐ SYNC reproduce and exclusive auto-mute.
- ☐ Remote control of all functions.

The perfect pair.

Use the 380 to create new, ultimate-performance recording equipment, or to give your old tape or mag-film recorder a sound so clean you must hear it to believe it. \$820.00

Model 370 is intended for routine replacement use. It is compatible with most studio transports and a wide variety of original and replacement heads. The 370 will make "new" machines out of your older studio recorders, delivering superior performance and great reliability. \$580.00

For more information, see your distributor or contact us today.

IBS

National Convention

March 6-7-8, 1981 WASHINGTON, D.C. Shoreham Hotel

THIS IS THE ONE THAT STARTED IT ALL. . . a weekend packed with the kinds of useful, practical and informative sessions and people that have made this THE annual convention for school and college broadcasters.

ASK ANYONE WHO'S BEEN TO ONE. . . an IBS National Convention brings together good people with good information and good times. The results: a sharing of ideas and re-charged motivation to make things better for you and your station.

Though it's too early to have a specific session schedule. . . just about every topic of interest to school and college broadcasters will receive some attention during the weekend. Included are the general areas of:

Programming
Record Service
FCC Rules & Regs
Cable Radio
Promotion
Sports
Production

News
Engineering/Technical
Fund Raising
Carrier-Current
High School Station Problems
Careers
Sales

. . . and a lot more

NOW IS THE TIME TO START MAKING YOUR PLANS TO ATTEND

Early reservations, ride sharing, room sharing, and cooperative travel arrangements with other stations in your area may help cut expenses.

The Registration/Check-In desk will open at 12 Noon on Friday, March 6th, with sessions starting about 3:00 p.m. On Sunday, March 8th, the last sessions will end no later than 12 Noon to allow for hotel check-out, and time to play tourist in Washington and/or to travel back home.

REGISTRATION INFORMATION & DETAILS WILL BE MAILED TO ALL IBS MEMBER-STATIONS

Check with your Station Manager, or write to:

NEW YORK

You've got to be tough to make it here. This is the country's number one radio market, and New York University's WNYU is in the heart of it all, just off Washington Square.

When WNYU engineers set about replacing their carrier transmitters, they had some hard questions to ask. Could they achieve full coverage of their largest quadrangle? Could they provide high quality audio, competitive with a full dial of other AM stations? And, most importantly, would the transmitters function dependably—24 hours a day?

Radio Systems was able to give them the right answers and back them up. Over 400 of our "Phase II" transmitters are in the field today—providing strong, clear, carrier sound. And four of our transmitters are on the air at WNYU—where only the strong survive.

Radio Systems' "Phase II" transmission equipment.
The TR-20, 20-watt, solid state transmitter—with built-in audio limiter.
The sophisticated CP-15 coupling/matching unit.
